

Restylane SubQ™

For instant non-surgical  
facial reshaping and  
contouring

Restylane®  
Natural beauty from within

# Restylane SubQ™ is the innovative aesthetic treatment that gets to the heart of facial ageing – instantly enhancing your appearance by adding volume to restore youthful facial shape and contour

## Maintaining your looks is more than managing lines and wrinkles

Smooth skin is highly prized as an indicator of youth, but with age also comes loss of facial volume. In contrast to the fullness of a youthful face, the older face can look tired – especially in the region of the eyes and cheeks.

Management of facial ageing is more about restoring this lost volume and addressing the 'dragging' and 'sagging' effects of gravity than just treating lines and wrinkles alone.

## Cheek augmentation

Before

After

Restylane SubQ adds definition to flat cheeks, giving them a more sensual line. It also enhances a great cheekbone structure to give a more 'glamorous' look.

## Restylane SubQ™ restores volume where it's needed most

Restylane SubQ™ is the ideal way to correct the volume loss associated with ageing. It's made from a unique form of hyaluronic acid, a substance that binds water in the skin to restore fullness, giving a youthful shape and contour to the face.

Just a touch of additional volume provided by Restylane SubQ can make a big difference to your general appearance – the overall effect is a natural-looking, mid-face lift.

## Cheek augmentation

Before

After

Cheek enhancement has the added advantages of improving nose-to-mouth lines and tear troughs – the hollows between the eye area and the upper cheek that create a 'tired all the time' look.

The hydrating properties of Restylane SubQ will also leave your skin smooth and firm but still soft to touch.

## A treatment you can trust

Like all Restylane® products, Restylane SubQ is made entirely from Stabilized Non-Animal Hyaluronic Acid (NASHA™). With a proven 12-year track record of more than 9 million Restylane treatments successfully performed worldwide, you can be assured of its enduring quality and safety.

## Mid-face enhancement

Before

After

Restylane SubQ restores fullness to a flat mid-face profile, creating a fresh, youthful appearance.

## **Restylane SubQ™ provides long-lasting natural results**

A Restylane SubQ treatment session is usually completed in under 30 minutes and you'll see the improvement to your facial contours immediately.

Restylane SubQ is long lasting, in excess of a year, but importantly it's not permanent. So while beauty trends come and go you won't run the risk of being stuck with a look you come to regret in the years to come.

## **Restylane SubQ™ treatment benefits**

Restylane SubQ offers an instant, subtle and natural solution for facial reshaping and contouring.

While a facelift can tighten your skin and reduce the appearance of lines and wrinkles, it cannot replace volume in the skin. Restylane SubQ can go where the scalpel can't.

Restylane SubQ offers greater convenience, predictability and cost effectiveness compared to fat transfer.

Unlike permanent cheek or chin implants, Restylane SubQ leaves you in control of the way you look.
